

Updating Zibo Mod

May 14, 2019

1 Procedures

1. Go inside Zibo Mod installation folder\plugins\lua\scripts\B738.fms\.
2. Open B738.fms.lua.
3. Search for the string "cycle_n".
4. Increase the number of cycle by 1. For example, if "cycle_n" = 32 then increase it to 32.
5. Go down to "cycle_data" and add one more entry at the end of the array.
6. The first number of the new entry is the index, second is cycle number and third is active period.
7. To find the cycle number open "earth_nav.dat" in the "Output" folder. The cycle number will be on second line of the file.
8. Go over: https://www.faa.gov/air_traffic/flight_info/aeronav/digital_products/cifp/download/ and compare the cycle number to the zip file name to find the correct active period.
9. Make sure to have a comma "," at the end of the previous entry of "cycle_data" and have the correct indentation to the newly added entry.
10. Start X-Plane and Zibo Mod to confirm the new database is working.
